

SOLAR HEALTH BECOMES CARBON NEUTRAL

Solar Health have recently received EnviroSave's highest level "No Carbon" designation, after offsetting the businesses emissions that are under the company's control.

EnviroSave's Neil Burnard says, "We were commissioned by Solar Health to gain an understanding of their businesses' environmental profile. We commenced the assignment by gathering the required data to measure Scope 1 and Scope 2 emissions using Greenhouse Gas accounting methodology.

Solar Health's Jackie Reader says, "Personally I have always had an interest in the Environment. After speaking with EnviroSave I realised that we could probably do more as a business. EnviroSave completed an analysis of our Carbon footprint. They also helped us develop a Carbon Reduction Plan that included initiatives for making savings in terms of Carbon Reduction; this also has the effect of reducing our business expenditure, in areas such as electricity usage. The plan also provided us with an Environmental Policy."

As a business we measure, reduce and then 100% Offset the emissions we are unable to avoid. This year we selected three projects to support following our review with EnviroSave. The projects we chose focused:

- Run-of-river Hydropower in Ceyhan Basin, Turkey
- Biomass cogeneration in Sao Paulo, Brazil
- Methane Capture from Landfill, Chile

"Our Carbon Reduction Plan is an ongoing work in progress and we are looking forward to continuous improvement, we are looking forward to EnviroSave's next review to see just what has been achieved."
